

MARS Referral and Support Program

Business brief for reverse mortgage customer journeys

Combine a traceable referral program with optional help from a trusted person. The aim is to support customers through their application and make follow-up easier for the MARS team. Customer-controlled helper access is a proposed extension to the current demo.

1. Business Problem

Informal introductions can be hard to attribute

It's difficult to link a new customer to the person who referred them.

Customers need help with documents and tasks

This can delay applications and lead to repeated support calls.

These are business needs to validate in a pilot.

2. Proposed Experience

3. Referral and Reward Journey

A separate invitation after confirmed account funding introduces the customer to the referral program. An invitation does not mean a reward has been earned.

4. Key Rules

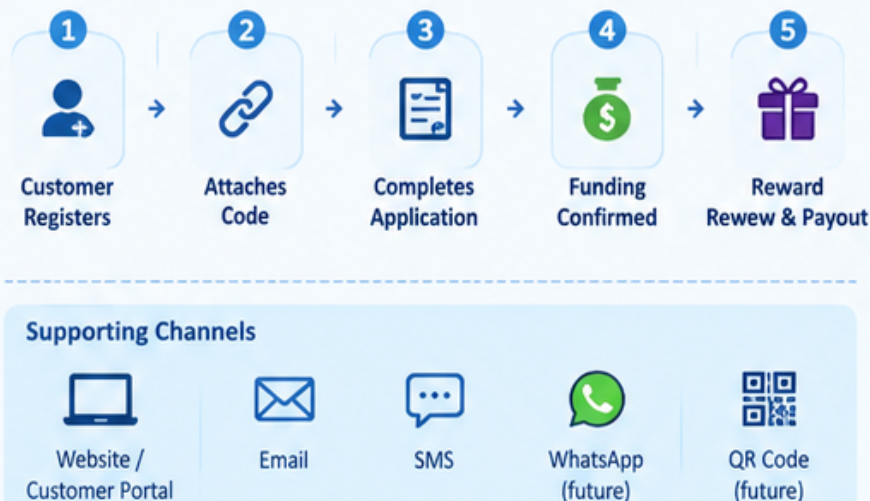

- ✓ One sharing code can serve many people.
- ✓ Each referred profile can attach only one code.
- ✓ No replacement or self-referral.
- ✓ New and existing customers (without a code) can participate.
- ✓ The demo rewards the first qualifying funding after attachment, once per referred customer.

Example benefits (subject to review):

500 welcome credits and 1,000 referrer credits. These are not an approved commercial offer.

5. Customer Journey – End to End

6. Current Demo and Proposed Additions

Current Demo

- ✓ Registration
- ✓ Admin and Customer Portals
- ✓ Referral tracking
- ✓ Reward review
- ✓ Simulated payouts
- ✓ Paginated messages and activity logs
- ✓ JSON persistence

Proposed Additions

- + Customer-approved helper access
- + Shared task checklists and reminders

Future Work

- WhatsApp outreach
- Live MARS funding integration

7. Pilot and Launch Decisions

Reward amounts

Currency

Eligibility

Frequency

Payout terms

Measure in Pilot

- Completed applications
- Time to funding
- Support follow-ups
- Cost per additional funded customer

Treat improvements as pilot goals, not proven results.

Helper permissions

Authoritative funding event
